Assignment -2

Python Programming

| Assignment Date | 23 september 2022 |
|---------------------|-------------------|
| Student Name | Priyanka.M |
| Student Roll Number | 311419205029 |
| Maximum Marks | 2 Marks |

Data Visualization and Pre-processing

Question-1: 1.

Load the dataset

Solution:

```
import pandas as pd import
seaborn as sns import
matplotlib.pyplot as plt import numpy
as np sns.set_style('darkgrid')
sns.set(font_scale=1.3)

In [2]:
df=pd.read excel("/content/Churn Modelling.xlsx")
```

```
import pandas as pd
import seaborn as sns
import matplotlib.pyplot as plt
import numpy as np
sns.set_style('darkgrid')
sns.set(font_scale=1.3)

In [2]:

df=pd.read_excel("/content/Churn_Modelling.xlsx")
```

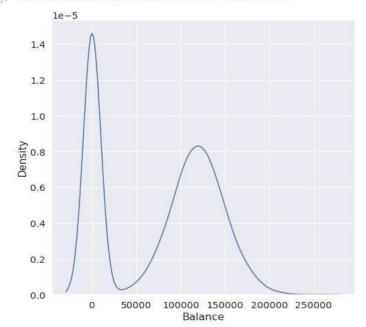

Question-2:

- 2. Perform Below Visualizations.
- Univariate Analysis
- Bi Variate Analysis
 Multi Variate Analysis

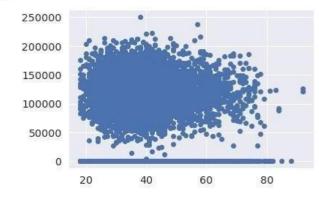

```
#Perform Univariate Analysis
plt.figure(figsize=(8,8))
sns.kdeplot(x=df['Balance'])
```

 ${\tt Out[7]:} \begin{tabular}{ll} & \tt Out[7]: \\ & \tt Out[7]$

#Perform Bivariate Analysis plt.scatter(df.Age,df.Balance)

#Perform Bivariate Analysis df.corr()

Notes

- [1] Standard Errors assume that the covariance matrix of the errors is correctly specified.
- [2] The condition number is large, 2.32e+05. This might indicate that there are strong multicollinearity or other numerical problems.

Question-3:

3. Perform descriptive statistics on the dataset.

```
#Perform Descriptive Statistics
df=pd.DataFrame(df) print(df.sum())
```

```

9998 0.125231

9999 1.076370

Name: EstimatedSalary, Length: 10000, dtype: float64
```

Question-6:

6. Check for Categorical columns and perform encoding

```
#Check for categorical columns & performs encoding from
sklearn.preprocessing import LabelEncoder

df['Gender'].unique() df['Gender'].value_counts()
encoding=LabelEncoder()
df["Gender"]=encoding.fit_transform(df.iloc[:,1].values) df

l: #Check for categorical columns & performs encoding
    from sklearn.preprocessing import LabelEncoder
    df['Gender'].unique()

l: array(['Female', 'Male'], dtype=object)
```

```
#Check for categorical columns & performs encoding
df['Gender'].value_counts()

Male 5457
Female 4543
Name: Gender, dtype: int64
```

10000 rows × 11 columns

Question-7:

7. Split the data into dependent and independent variables.

Solution:

Question-8:

8. Scale the independent variables

Solution:

```
#Split the data into Dependent & Independent Variables
print("------Dependent Variables-----")
X=df.iloc[:,1:4] print(X) print("-----
Independent Variables-----") y=df.iloc[:,4]
print(Y)
print("-----")
```

Question-9:

9. Split the data into training and testing
